#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

#### Regarding claim 1:

The phrase "currently acceptable automotive ratings" is indefinite, as they may change over time and/or vary with respect to types or application of these battery devices.

### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cameron (US PN 5120617) in view of Thomsen et al (US PN 5871858).

#### Regarding claim 1:

Application/Control Number: 10/008,666

Art Unit: 2836

Cameron discloses a circuit breaker assembly 10 that is mounted on a conventional vehicle battery 120 comprising first and second terminals, first and second electrical contacts, housing 12, see Figures 4 and 5, and 10:46-68,11:1-32.

Cameron does not disclose a metal mounting plate.

It is well known to mount electrical components on metal mounting plates,

Thomsen et al disclose a rectangular, flat, mounting plate 69 for an anti-theft device for a vehicle battery, see Figures 3-6 and 10:45-67.

It would have been obvious to one having ordinary skill in the art at the time of the invention to have modified Cameron with the teachings of Thomsen et al and mounted the electrical circuit components on a metal mounting plate for rigidity and ease of electrical connection to vehicle electrical system.

5. Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cameron and Thomsen et al as applied to claim 1 above and further in view of Admitted Prior Art (APA).

Regarding claims 2-5:

Cameron does not disclose locating the circuit breaker on the various other surfaces of the battery, only on the top surface.

The Applicant has stated that a specific location of the circuit breaker on the battery does not derive any benefit over any other, see sheet7, lines19-22. Furthermore, it is well known that the mounting location or positioning of electrical hardware such as a circuit breaker could be a design choice peculiar to the specific application.

Art Unit: 2836

It would have been obvious to one having ordinary skill in the art at the time of the invention to have modified Cameron by locating the breaker on a battery surface ideal for the specific application to facilitate ease of wiring to the vehicle's electrical system.

# Response to Arguments

6. Applicant's arguments filed 6/01/2004 have been fully considered but they are not persuasive.

Items 3-5, above, restate the rejections from the last Office action of 3/01/2004; in which all dependent claims were also treated.

7. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the mounting of electric or electronic components to a metal mounting plate is well known.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A Demakis whose telephone number is 571.272.2050. The examiner can normally be reached on 7:30AM-4:00PM.

Application/Control Number: 10/008,666

Art Unit: 2836
